Applicant's submission filed on 9-23-08 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prud'Homme Van Reine et al (4,699,774) further in view of Tiedt et al (5,625,256).

Prud'Homme Van Reine et al teach a translucent polycrystalline alumina bodies used for discharge lamps further including less than 1000 ppm MgO and between 20 and 200 ppm Er_2O_3 . Prud'Homme Van Reine et al fail to teach the inclusion of 50-600 ppm ZrO_2 .

Tiedt et al teach a translucent polycrystalline alumina body for lamp applications includes in the most preferred amount 300-600 ppm ZrO_2 to improve mechanical stability, translucency and improve resistance to diffusion, see column 4, lines 27-31.

One of ordinary skill in the art at the time of the invention would have found further adding ZrO_2 in amounts of 300-600ppm to the composition of Prud'Homme Van Reine et al obvious because Tiedt et al teach that adding ZrO_2 improves the mechanical stability, translucency and resistance to diffusion of polycrystalline alumina bodies that are used for lamps.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
